

Cincinnati Centerless Grinder Servo Motor Upgrade

Keep your Cincinnati Centerless Grinder working for you

Increase productivity and reduce maintenance and downtime by replacing your OEM AC Motor with a high efficiency servo motor.

- Your new servo motor will automatically detect load inertia and adjust the servo gains, eliminating the need to adjust the servo tuning gains manually.
- The electronic vibration suppression automatically compensates for limitations in a machine's mechanical design to ensure consistent, quicker and quieter performance.
- By simplifying your machine's design with a new efficient servo motor, you will reduce gearbox size and reduce the number of parts required to run at optimum levels. Gears, worm shafts, worm wheels, clutches and variable pulleys will no longer be a concern.

- ***Eliminate OEM 2-speed drive box***
- ***Maintain consistent part roundness***
- ***Reduce MRO parts needed***

- ***Infinite speeds from 10-300 RPM***
- ***Increase accuracy and reliability***
- ***No machine modification***
